

*Amadeo Balbi*

Amedeo Balbi is associate professor of astronomy and astrophysics at the Physics Department of the University of Rome Tor Vergata, Italy. He received his PhD in astronomy in 2000 from the University of Rome. He is the author or co-author of over 90 scientific papers, spanning a broad set of topics, including the physics of the early universe, the problem of dark matter and energy, and the search for life in the cosmos. His current research interests include theoretical studies of habitability and understanding the emergence of complexity and the distribution of life in the universe. He is a member of the International Astronomical Union and of the Foundational Questions Institute (FQXi).
