

*Erik Zackrisson*

Erik Zackrisson is an Associate Professor in astronomy at Uppsala University, Sweden, and works primarily in the field of high-redshift galaxies. He is also the leader of the first Swedish SETI endeavour, Project Hephaistos (<http://www.astro.uu.se/~ez/hephaistos/hephaistos.html>). The first Hephaistos paper looked at outliers in the Tully-Fisher relation in search of Kardashev type III civilizations in nearby disk galaxies (Zackrisson et al. 2015, ApJ, 810, 23). Ongoing work include a search for individual Dyson spheres with Gaia and a study on the prospects of near-IR laser SETI with upcoming high-resolution spectrographs at the VLT and ELT.
