Gregory Berns

Gregory Berns, M.D., Ph.D. is the Distinguished Professor of Neuroeconomics in the Psychology Department at Emory University, where he directs the Center for Neuropolicy and Facility for Education and Research in Neuroscience. His current research uses fMRI to study canine cognitive function in awake, unrestrained dogs. The goals of these projects are to non-invasively map the perceptual and decision systems of the dog's brain. He also uses diffusion tensor imaging (DTI) to reconstruct the white matter pathways of a wide variety of other mammals, including dolphins, sea lions, coyotes, and the extinct Tasmanian tiger.
