

*Nathalie A. Cabrol*

Nathalie joined the SETI Institute (SI) in 1998, where she is a Senior Research Scientist. She was named Director of the Carl Sagan Center at the SI in August 2015. In addition to framing the scientific vision at the SI, she leads projects in planetary science and astrobiology, develops science exploration strategies for Mars, Titan, and the Outer Solar System icy moons, and designs robotic field experiments. She explores high altitude lakes in the Andes where environmental conditions are analogous to early Mars. With her team, she documents life's adaptation to extreme environments, the effect of rapid climate change on lake ecosystems and habitats, its geobiological signatures, and relevance to planetary exploration
