

*Terrence W. Deacon*

Terrence W. Deacon held faculty positions at Harvard University, Boston University, and Harvard Medical School before assuming his current position as Professor of Biological Anthropology and Cognitive Science at the University of California, Berkeley. His research extends from laboratory-based cellular-molecular neurobiology to the study of semiotic processes underlying animal and human cognition and communication, including language. He is the author of over a hundred published papers as well as two books: "The Symbolic Species: The Coevolution of Language and the Brain" (1997) and "Incomplete Nature: How Mind Emerged from Matter" (2012).
